Press Release

Despite rapid advances in prosthetic technology, an estimated 60% of amputees lack access to a prosthetic device because of disparities in healthcare, insurance, access, and many other factors.

To overcome these inequities and ensure that all American amputees have access to this essential health technology, **disABled Life Alliance**, a public benefit corporation, announces the **Prosthesis for Every Limb Initiative**.

The disabled community in the United States comprises **26%** of the population, with approximately **62 million** people affected (CDC). Currently there are over **2.1 million** amputees with an additional **185,000** new amputees each year, and projections indicate there will be **3.6 million by 2050** (Amputee Coalition). Overall health, mobility and independence are at risk without a prosthetic device and proper care of amputees.

disABled Life Alliance is partnering with **Crowdsmart, Inc.**, a collective intelligence AI technology, to further this initiative. Crowdsmart AI technology will enable members of the amputee community to contribute their ideas, engage with other community members' ideas, and be a crucial component in accomplishing the objectives of this critical initiative.

Together, our goal is to develop innovative solutions by identifying the challenges that community members face, sourcing programs and companies that are addressing these issues, and collaborating to create a comprehensive, inclusive, and accessible program that can be broadly adopted.

Press Release

disAbleD Life Alliance

The **disAbleD Life Alliance** is a public benefit corporation that helps drive far-reaching positive change within the disabled community. We offer advisory and transactional services to major private funders who wish to invest their resources in solving issues affecting people with disabilities. Operating at the nexus of community needs and strategic philanthropy, we harness the power of collective intelligence technology to gather real-time data from the community to inform our strategies for co-creating meaningful change.

CrowdSmart

CrowdSmart AI enables any team to quickly engage and reason together to co-create accurate priorities and recommendations to accelerate problem-solving. Delivered as a cloud service, CrowdSmart's patented human+generative AI helps groups share and refine their intelligence with curated insights from channels and the Web to generate trusted and predictive recommendations. CrowdSmart AI is a secure and transparent cloud service that integrates easily with other applications, transforming any group of people into powerful co-creators in Web3 ventures, public-benefit DAOs and IRL communities across companies, non-profits, and public agencies.
